Listing of Claims

- 1. (Currently Amended) An X-ray source comprising:
- an electron source (1) for the emission of electrons (E),
- a target (4)-for the emission of characteristic, substantially monochromatic X-rays (C)-in response to the incidence of the electrons-(E), said target (4)-comprising a metal foil (5)-of a thickness of less than 10µm and a base arrangement (7, 12)-for carrying said metal foil-(4), wherein the metal of said metal foil (5)-has a high atomic number allowing the generation of X-rays (C)-and the material substantially included in the base arrangement (7, 12)-has a low atomic number not allowing the generation of X-rays (C), and
- an outcoupling means (11)-for outcoupling the X-rays (C) on the side of the metal foil (5) on which the electrons (E) are incident and which is opposite to the side of the base arrangement (7, 12).
- 2. (Currently Amended) AnThe X-ray source as claimed in claim 1, wherein said base arrangement comprises a rotatable base plate (12) of a material having an atomic number of less than 10, in particular in the range from 4 to 6.
- 3. (Currently Amended) An The X-ray source as claimed in claim 1, wherein said base arrangement comprises a cooling circuit (7)-arranged to allow a coolant (8)-to flow along the side of said metal foil (5)-opposite to the side on which the electrons (E)-are incident.
- 4. (Currently Amended) An<u>The</u> X-ray source as claimed in claim 3, wherein the coolant (8) has a mean atomic number of less than 10.
- 5. (Currently Amended) An The X-ray source as claimed in claim 3, wherein the coolant (8) is water.
- 6. (Currently Amended) AnThe X-ray source as claimed in claim 3, wherein said cooling circuit (7)-comprises a constriction (10)-in the area of the metal foil-(5).

- 7. (Currently Amended) AnThe X-ray source as claimed in claim 3, wherein said target (4)-further comprises a carrier (6) of low atomic number material, in particular having a mean atomic number of less than 10, supporting the metal foil (5) on the side facing the coolant (8).
- 8. (Currently Amended) An<u>The</u> X-ray source as claimed in claim 1, wherein the metal foil (5)-has a thickness of less than 5μm, preferably between 1 and 3μm.
- 9. (Currently Amended) An<u>The</u> X-ray source as claimed in claim 1, wherein the metal of said metal foil (5)-has an atomic number between 40 and 80.
- 10. (Currently Amended) An The X-ray source as claimed in claim 1, wherein said outcoupling means (11)-is adapted to outcouple X-rays (C)-at angles of an angular range from substantially 45° to 135°, in particular 70° to 110°, to the surface of the metal foil-(5).
- 11. (Currently Amended) An The X-ray source as claimed in claim 1, wherein said outcoupling means (11)-is adapted to outcouple X-rays (C)-in a direction substantially antiparallel to the direction of incidence of said electrons (E), in particular in a direction at an angle in the range from 150° to 210° to the direction of incidence of said electrons (E).
- 12. (Currently Amended) An The X-ray source as claimed in claim 1, wherein said electrons (E) are directed onto the surface of said metal foil (5) at a substantially 90° angle.
- 13. (Currently Amended) An The X-ray source as claimed in claim 1, wherein said electron source (1)-is located outside the X-ray beam (C)-to be outcoupled, said X-ray source further comprising means (2)-for directing the electron beam (E)-onto the metal foil (5).

generation of x-rays.

14. (Currently Amended) A target for use in an X-ray source for the generation of characteristic, substantially monochromatic X-rays (C)-in response to the incidence of electrons (E), said target (4)-comprising a metal foil (5)-of a thickness of less than 10μm and a base arrangement (7, 12)-for carrying said metal foil (5), wherein the metal of said metal foil (5)-has a high atomic number allowing the generation of X-rays (C) and the material substantially included in the base arrangement (7, 12)-has a low atomic number not allowing the generation of X-rays (C).

an electron source for the emission of electrons, and a target for the emission of substantially monochromatic x-rays in response to the incidence of the electrons, said target comprising a metal foil and base arrangement, said metal foil allowing the generation of x-rays and the base member not allowing the

- 16. (New) The x-ray source as claimed in claim 15, wherein said base arrangement comprises a cooling circuit to allow a coolant to flow along the side of said metal foil opposite to the side on which the electrons are incident.
- 17. (New) The x-ray source as claimed in claim 16, wherein the coolant is water.
- 18. (New) The x-ray source as claimed in claim 16, wherein said cooling circuit comprises a constriction proximate the metal foil.
